

Digital Health

With the increasing digitisation of everyday life, and mounting cost-pressures in healthcare across all jurisdictions, digital health is set to revolutionise healthcare and become the "norm" for future generations.

In this microsite, we aim to highlight some of the key considerations that will need to be borne in mind when entering into the digital health sphere including, regulatory risks, intellectual property protection, big data, use of open source software, collaborative research and development and commercialisation, raising investment, product liability and litigation considerations. We also have included template documentation to help kick-start any digital health project.
